To whom it may concern, I strongly object to cancer causing and multiple other health issues glyphosate and its other toxic cocktails combined with it being sold in the United States. There are no "safe levels" We require a 0 level. N O N E. You are in a position to protect life. Please ban the manufacture of this, it will take years to totally eliminate it from already existing garages and store shelves. All roundup products need to be eliminated. The rise in cancer in young people should be a red flag to YOU. Ban the manufacturing and sale. It is certainly not safe. California used to have lots of citrus, crops, and healthy bees. Since the GMO's being flooded into Monterey our citys paid off greedy people flooding out grocery stores with toxic food naive consumers purchasing smelly toxic round up products, dousing their yards etc with these, sets off a chain reaction. Has it escaped your attention to review the epidemiology information? We have to place our trust in you please consider doing the right thing? Sincerely, Laura Bruuner
